## Harms and Models of Disability Results for Christine En-Tse Cheng

Submitted Dec 17 at 4:38p.m.

Unanswered

### Question 1

0 / 1 pts

Which of the following best describes the main point of the first pre-lecture video?

- ☐ It is important to appropriately credit others when your software ideas come from them.
- ☐ It is important to make sure that team members all make fair contributions to group projects.
- ☒ It is important to take into account user diversity when designing software.
- ☐ It is important to make sure that your software handles user data securely.

Unanswered

### Question 2

0 / 1 pts

Which of the following best describes a *relational harm* in the context of software design?

- ☐ A user cannot access an app and loses opportunities for employment.
- ☐ A user can't access an app and so can't participate in their friends' conversations
- ☐ A user experiences financial loss due to a bug in an app.
- ☒ A design decision communicates that certain users are less than equal.

Remember, the video talks about *relational* and *material* harms. Which ones are material and which are relational?

Unanswered

### Question 3

0 / 1 pts

Which of the following groups is *least* likely to be treated as less than equal by a design decision that excludes them?

- ☐ Women
- ☐ Elderly people
- ☐ Racialized people
- ☒ Android users

Unanswered

### Question 4

0 / 1 pts

What factor makes relational harm more severe according to the module?

- ☐ The exclusion is temporary and easily reversible.
- ☐ The app is free and widely available.
- ☐ The decision is made by someone who is not in a position of authority.
- ☒ The excluded group belongs to a historically sensitive or vulnerable group.

### Question 5

0 / 1 pts

Consider the following. The two red figures on the left of each image are from a vulnerable group, and the two blue figures are not. The people in the box in each image are being excluded by the design of an app. Which of the scenarios is the *worst* — in terms of relational harm — according to what we have learned about relational harms?

☐

They are all *equally* bad since more of the vulnerable group is being excluded than the non-vulnerable group.

### Question 6

0 / 1 pts

Which of the following is most clearly an example of a *medical model* intervention to address a disability?

- ☒ sip-and-puff input systems
- ☐ automatic captioning in Powerpoint
- ☐ Fingerprint unlocking on an electronic device
- ☐ Screen zooming on a computer

This intervention is "further" from the impairment, and it is a generally useful feature in many software products today.

Unanswered

### Question 7

0 / 1 pts

Which of the following is a "background" condition according to the *social model of disability*?

- ☐ the limitation
- ☒ the impairment
- ☐ the disability itself

- ☐ the human world

Unanswered

### Question 8

0 / 1 pts

Which of the following is most clearly an example of a *social model* intervention to address a disability?

- ☐ a prosthetic limb
- ☒ a wheelchair ramp
- ☐ pharmaceutical drugs
- ☐ eyeglasses

This attempts to *remove the impairment*. Such an intervention is more consistent with the *medical* model of disability.
